

Photoshop 3

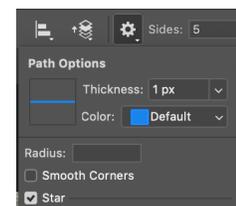

Shapes & Text

Drawing Shapes

Right click on **shape tool**. Go up to **Fill** on top panel. Select color for fill. Click, hold and drag a shape onto your art board. Hold down Shift to make the shape proportional.

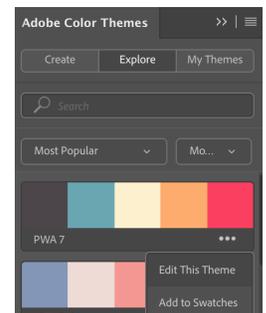

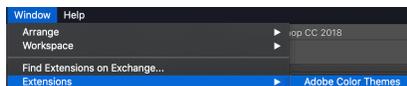

To change size of shape: **Edit > Transform Path > Scale**. Then click *return* to commit.

To make a star, use polygon tool, go to cog on top panel and select star from dropdown.

Add New Colors

Go to **Window > Extensions > Adobe Color Themes**. Click on explore. To add a pallet of colors to your swatches, click on dotted line, **Add to Swatches**

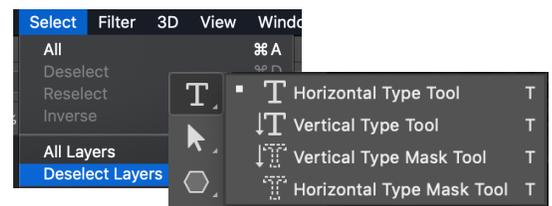

To steal colors from an image, select the layer you want to work from, click on hue slider. When color window opens, grab gray bar at top to move it out of the way and then use the eyedropper to select a color from your image and add it where you want.

Add Text

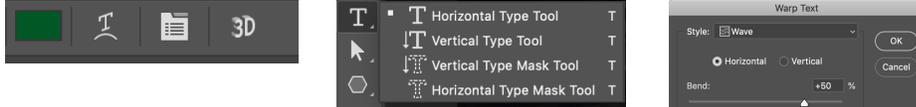

Select type tool. To make sure no layers are selected go to **Select > Deselect Layers**.

Using type tool, click, hold and drag out a box and type your text. You can adjust character properties (size, font, space between lines) in Properties. You can also adjust size by selecting text box, then **Edit > Transform Path > Scale (control/T)**.

Warp Text

Select the layer of your Type, and be on the type tool. Go to Warp Text on top panel. T with arc line beneath it. Select style from drop down and adjust with sliders.

Type on a path

Right click the **Pen** tool and select the **Freeform Pen** tool. Click on cog (gear at top panel) to adjust *curve fit* to around 5.

Using the **Freeform Pen** tool, draw a path along which you would like to type. Then, select the **Text** tool, and move cursor along the path to where you want to type to start. Hover over the path until you get the *curved dotted line* crossing the path. Avoid *box* and *circle*. Select font size and start typing.

To adjust your text use the **Path Selection** tool. Click, hold and drag the *small x* on the path just in front of the beginning of your text.

To move your text path, select the **Move** tool.

Type on a circle

Select the **Ellipse Tool**. Change shape to path in top panel. Click and drag out a circle. Use **Direct Selection Tool** to move cycle where you want it to be.

Select **Text Tool**. Move cursor to the circle path you created. Hover over path where you want to begin to type. When you see *curved dotted line*, begin typing. When done, click *return*.

To rotate text, **Edit > Transform Path > Scale (control/ T)**. To move text to inside of a circle path, select **Direct Selection Tool**, click, hold and drag text to inside of circle path.
